Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

1. (currently amended) An alkynyl S,N-acetal derivative of comprising the following structural formula:

wherein R^1 represents a hydrogen atom, an alkyl group, an aryl group, an alkenyl group, a silyl group, or an alkynyl group; each of R^2 and R^3 represents an alkyl group or an allyl group; and R^4 represents an alkyl group.

2. (original) The alkynyl S,N-acetal derivative according to claim 1, wherein R^1 represents an alkyl group, an aryl group, an alkenyl group, or a silyl group.

3. (original) The alkynyl S,N-acetal derivative according to claim 1, wherein each of R^2 and R^3 represents an alkyl group.

4. (original) The alkynyl S,N-acetal derivative according to claim 1, wherein R^1 represents an alkyl group, an aryl group, an alkenyl group, or a silyl group; and each of R^2 and R^3 represents an alkyl group.

5. (currently amended) A method of producing an alkynyl S,N-acetal derivative of the following structural formula (1):

Appl. No. 10/734,850

wherein R^1 represents a hydrogen atom, an alkyl group, an aryl group, an alkenyl group, a silyl group, or an alkynyl group; each of R^2 and R^3 represents an alkyl group or an allyl group; and R^4 represents an alkyl group, the method comprising:

~~reacting~~ ~~mixing~~ thioformamide and an alkylating agent in a solvent to ~~react the thioformamide and the alkylating agent~~, the thioformamide being represented by the following structural formula (2):

the alkylating agent containing a compound represented by the following structural formula (3):

and X representing a perfluoroalkylsulfonate; and

further ~~reacting a reaction product of the thioformide and the alkylating agent with adding~~ an alkynyl metal reacting agent ~~in~~ into the solvent to ~~react a reaction product of the thioformamide and the alkylating agent with the alkynyl metal reacting agent~~, the alkynyl metal reacting agent containing a compound represented by the following structural formula (4):

and M representing an alkali metal atom, where R^1 , R^2 , R^3 , and R^4 are as previously defined with respect to structural formula (1).

6. (original) The method according to claim 5, wherein X in the structural formula (3) represents a triflate ion.

7. (original) The method according to claim 5, wherein M in the structural formula (4) represents a lithium atom.

8. (original) The method according to claim 5, wherein the solvent is diethyl ether or tetrahydrofuran.

9. (currently amended) The method according to claim 5, wherein the reaction product of the thioformamide and the alkylating agent is reacted at ~~with the alkynyl metal reacting agent under an atmosphere~~ of a temperature of 0 to 30°C.

10. (original) The method according to claim 5, wherein the reaction product of the thioformamide and the alkylating agent is reacted with the alkynyl metal reacting agent over a period of 15 to 60 minutes.
